

ORiN2 Software

FEATURES

Open Resource interface Network

ORiN2 provides the possibility to connect devices and application-software on to a network, by independent interfaces. There are various ORiN2 version available;

Bundle version

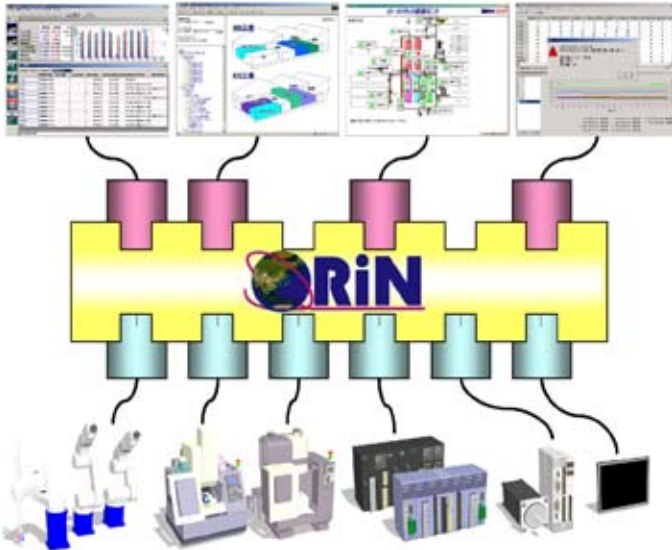

The Bundle version comes with providers for the DENSO robot controller which gives you the ability to write the robot program in a standard Windows-application, e.g. Visual Basic, C++, C-sharp, Delphi.

Runtime version

Same as Bundle version but with additional interfaces for devices as option.

SDK version

On top of the features of the Runtime version, the SDK version allows you to create custom interfaces

Package types	ORiN2 Bundle			ORiN2 Runtime			ORiN2 SDK		
	Support	Binary	Source	Support	Binary	Source	Support	Binary	Source
CAO Engine		√		√	√		√	√
